

Making Climate Finance in an Uncertain World

AFD - Agence Française de Développement, co-organized by Climate Action in Financial Institutions Initiative

9 November, 14:00– 15:30

In the climate space, the integration of uncertainty and scenario planning is becoming essential in many areas, from the elaboration of long-term low carbon and climate resilient pathways and corresponding policies, to the integration of climate risks and the design of specific investments that need to cope with a changing climate.

This side-event will discuss the relevance of using foresight in the area of climate finance, with concrete illustrations from development finance practitioners and policy makers, showing the benefits and challenges of integrating uncertainties and implementing anticipatory approaches. It will also exchange on the need for collaboration to improve decision-making under uncertainty.
